

ELIJAH DSOUZA

PMO Professional Transitioning to Product Management · AI-Native Workflows · Distributed Delivery

Pune, India · Open to Remote · +91 8999964670 · elijah26.dsouza@gmail.com

PROFESSIONAL SUMMARY

PMO professional with ~2 years of cross-functional delivery experience across distributed teams, with regular hands-on exposure to core product work — user research, customer feedback analysis, requirements definition, and shaping AI-powered features alongside engineering. Comfortable translating ambiguous problems into structured requirements, using data to inform decisions, and partnering closely with engineering and design. Bringing strong delivery fundamentals and a genuine curiosity for AI-driven product development to product-focused roles.

SKILLS

- **Product Discovery** — User research, customer feedback analysis, data-driven prioritization
- **Requirements Definition** — Translating ambiguous asks into clear specs and structured requirements
- **AI-Powered Product Development** — Supported Agentic AI/assistant from 0→1 to full product area alongside tech leads; MCP testing, prompt engineering
- **Data & Metrics** — SQL, Python, Power BI, Google Data Studio, KPI/OKR tracking, outcome analysis
- **Agile Delivery** — Scrum ceremonies, sprint planning, cross-functional engineering & design partnership
- **Stakeholder Communication** — Executive reporting, distributed team alignment, influencing prioritization
- **Tools** — Jira, Confluence, Notion, Asana, Figma, Trello, Slack, Google Analytics, Pendo
- **AI Tools** — Claude, ChatGPT, Gemini, Lovable, Bolt, v0, n8n, Supabase

WORK EXPERIENCE

Aera Technology, Pune, India | **Associate PMO – Data Science**

Jun 2024 – Present

Promoted from PMO Intern to Associate PMO · Jan 2025

Product-Adjacent Contributions

- Supported the development of an internal Agentic AI engine and AI assistant from 0→1 through to a full-fledged product area — the team has no dedicated PM, so I worked alongside tech leads on research, prototyping feedback, and coordination as it scaled.
- Beta-tested early versions of the AI assistant and its MCP (Model Context Protocol) integrations — surfacing bugs, suggesting enhancements, and building internal-team use cases to drive adoption.
- Ran lightweight user research and built a customer feedback pipeline that aggregated reported issues by theme and frequency, giving stakeholders a data-backed basis for prioritization.
- Translated ambiguous business requirements into clear, structured specs for engineering, reducing clarification cycles by ~50%.
- Identified opportunities to embed AI-powered capabilities into team workflows (ChatGPT, Claude) — proposing and helping implement intelligent documentation and automated reporting features, cutting manual effort by ~40%.
- Partnered with engineering to scope and build a developer-facing CLI tool addressing a recurring reporting pain point, reducing manual reporting effort by ~40%.

Core PMO & Delivery Execution

- Owned end-to-end project planning across 5+ concurrent initiatives — scope, milestones, dependencies, and resourcing in alignment with engineering, design, and business stakeholders.
- Maintained real-time delivery health dashboards (SQL, Python, Power BI, Google Data Studio), giving senior leadership continuous visibility into risks, velocity, and progress.
- Facilitated Agile ceremonies (sprint planning, retrospectives, standups) across distributed US & India teams, driving consistent delivery cadence and surfacing impediments early.
- Coordinated release cycles, beta testing programs, and QA processes with design and engineering — ensuring deliverables met quality and brand standards before launch.
- Synthesized cross-functional updates into concise executive presentations, influencing prioritization decisions across a multi-initiative roadmap.

EDUCATION

Christ College, Pune, India | **B.Sc. in Computer Science**

Apr 2024

- Head Coordinator – Science Department & NAAC Events: led multi-stakeholder planning, coordinated cross-functional teams, and managed large-scale execution end-to-end.
